

INDIVIDUAL GUIDANCE FOR COMPANIES IN GHENT

Posted on 19/09/2012

As part of the ACE project, the City of Ghent starts individual guidance for companies on the Ghent territory. This initiative aims at investigating opportunities around energy efficiency in order to come to structural measures in the field of rational energy consumption.

Take part and make a profit

You would like to decrease the energy bill of your company? You don't know how and where to start? Let our specialised energy consultant guide you step by step. They will start up an energy management system and thus help you to save money: depending on the size of your company, you can save up to thousands or hundreds of thousands of euros each year.

What to expect

Step 1: The energy consumption of your company will be investigated. The energy consumption and opportunities (with the financial gains) will be mapped.

Step 2: Implementation of an energy management system

The energy audit will result in a action plan in which the priorities and concrete objectives for the companies are described. The action points are included in a process of continuous improvement by means of an energy management system. Your company will be guided step by step by the energy consultancy agency.

Step 3: Make a profit

An example: with a yearly electricity consumption of 5.000MWh and 20% energy savings, your company can save up to 150.000€ each year. Considering the increasing energy costs, this amount will only increase. Moreover, the output of the individual guidance will be an important step in achieving the international ISO 50001 standard.

Register

Are you no covenant company or in other words, is the primary energy consumption of the site of your company minimum 1.000 MWh and maximum 27.000 MWh? Register now, as the available places are limited. For the whole guidance process, you pay only 500€.

Attention: per company on the Ghent territory, maximum 1 site will be guided per applicant.
